

FACILITYMASTER

NEW DIMENSIONS

The FACILITYMASTER combines EIBPORT V3, DATALOGGER V2, APPMODULE, KNXCONVERTER and AUDIOSERVER in one device. This guarantees a unique scope of services, ideal for the extensive requirements of large-scale projects. In addition, the professional server hardware offers outstanding performance. The combination of EIBPORT and APPMODULE enables the versatile integration of third-party applications. The EIBPORT offers visualisation and automation functions, while the APPMODULE provides the extensive application library from the BAB APP MARKET (www.bab-appmarket.de). The BAB SECURELINK protocol and the ADVANCED CENTRAL VIEW (on request) are available to the FACILITYMASTER for connection and management of real estate properties with minimum configuration effort. BAB SECURELINK is also implemented in the EIBPORT and the LINKMODULE systems, enabling encrypted plant coupling across network domains. In this way, the individual properties are connected via the Internet or intranet without any special configuration effort. ADVANCED CENTRAL VIEW provides specially optimized visualisation elements to ensure that the information can be displayed easily and clearly in the control center. With the help of the integrated DATALOGGER, the FACILITYMASTER offers professional data recording. It records up to 36 million records in an internal SQL database and regularly sends an Excel file by e-mail if desired. To round off the portfolio, KNXCONVERTER and AUDIOSERVER are also integrated. With the help of KNXCONVERTER, non-KNX-capable systems can be integrated via a simple ASCII protocol, while AUDIOSERVER and AUDIOMODULE enable you to set up sophisticated multi-room-audio installations.
