

INTERCOMM MODULE

HELLO. AND WELCOME.

BAB
TECHNOLOGIE

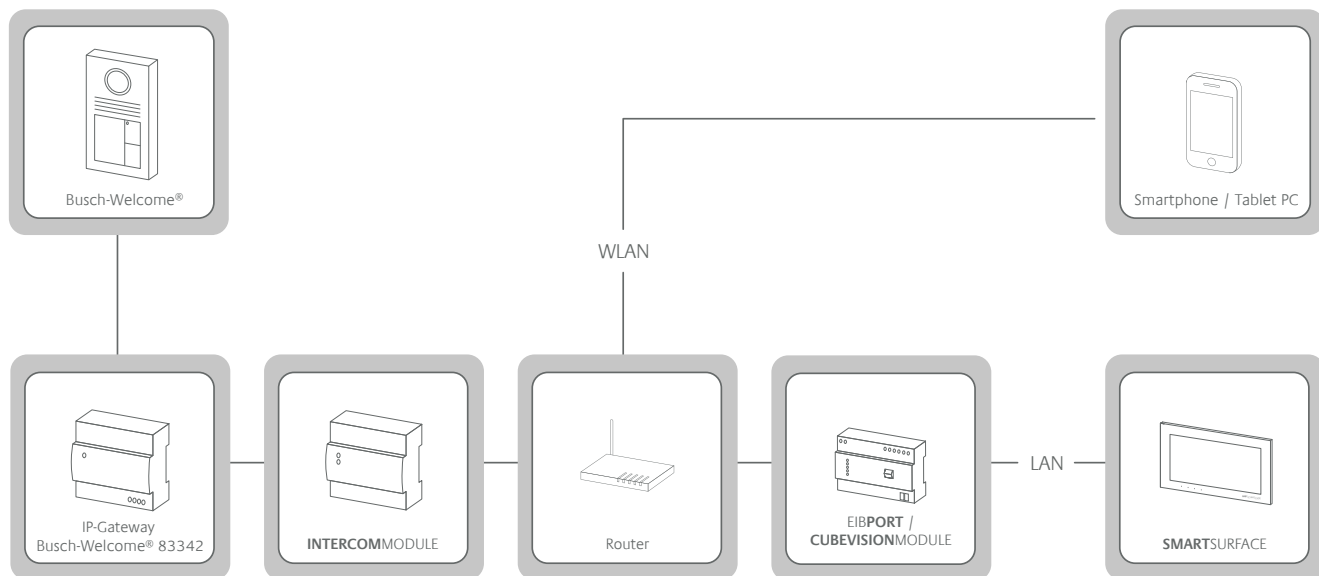

The **INTERCOMM MODULE** is the link between an IP-capable video intercom and a client. It converts audio and video signals into the WebRTC standard and additionally switches between intercom and client via SIP. In this way, you can easily integrate door communication into the **EIBPORT** and **CUBEVISIONMODULE** visualizations or use a web browser for communication. And of course, you can control functions such as opening the door and switching the lighting just as easily. The product portfolio is rounded off by the provided caller list with pictures and time information.

- + Integration of Busch-Welcome® systems
- + Integration of other manufacturers systems thanks to open system architecture
- + Intercom integration in **CUBEVISION**, **CONTROL L** and web browser
- + WebRTC standard and SIP protocol for door communication

PRODUCT USAGE

INTERCOMM MODULE IN USE

The **INTERCOMM**MODULE is connected to the IP gateway 83342 via LAN. It prepares video and audio data for use with a web browser. This allows a touch panel PC (e. g.: **SMARTSURFACE** with **CONTROL T**) can be used as an internal call station. The functions provided by the **INTERCOMM**MODULE can also be used as visualization using CUBEVISION. Door communication thus becomes an integral part of building visualisation.

Technical specifications

- Operating voltage: 12-32V DC
- Typical power consumption 300 mA at 12 V DC
- Power consumption: <= 5 W
- Connection: screw-type plug-in terminal
- Climate resistant: EN 50090-2-2
- Ambient temperature: -5 to + 35 °C
- Relative humidity (non-condensing): 5% to 80%.

Mechanical data:

- Mounting: REG housing 4 TE
- Dimensions (W x H x D) in mm: 72 x 90 x 63
- Housing: Plastic
- Protection class: IP20 (according to EN 60529)

Interfaces:

- Ethernet: RJ45 socket

Art. Nr. 10582
